GET THE JOB DONE ANYTIME, ANYWHERE.

Introducing the new Android™-powered Panasonic Toughpad™ family, the business tablets that go where no tablet has ever gone before. Combining data and device security, seamless connectivity and a long legacy of rugged and reliable computing, the new Panasonic 10" Toughpad A1 and Panasonic 7" Toughpad B1 tablets are the perfect melding of mind and muscle. The Panasonic Toughpad family has the most purpose-built tablets ever for mobile workers in any industry—giving you the right tool no matter what the job.

THE MOST SECURE TABLETS EVER.

The Panasonic Toughpad family is designed and constructed with the mission-critical mobile user in mind to offer secure connectivity.

HARDWARE ENCRYPTION

The Panasonic Toughpad family includes a dedicated secure core microchip that keeps secured information separate from the main processor. The processor also ensures keys are not exposed outside the hardware chip to ensure secure computing.

SOFTWARE SECURITY*

Panasonic's unique implementation of the Android platform enables many security features that are exclusive to the Panasonic Toughpad family, such as network proxy settings and so much more.

DEVICE MANAGEMENT

The Panasonic Toughpad family is equipped with low-level device controls for Mobile Device Management software, which allows the tablet to be controlled and highly secured by a network administrator.

PHYSICAL SECURITY

The Toughpad tablet has a reinforced cable lock slot for physical security to help keep the tablet with the owner.

** May require third-party software.*
